

SECTION 10

READING OF METERS

All water supplied by the District will be measured by means of water meters installed by the District. The cubic foot will be the unit of measure, and the amounts charged for service shall be based on the current rates established by the District.

In general, meters shall be read on a monthly or a bimonthly basis. As it is not always practicable to read meters at equal intervals, the period between reading dates may vary as much as five days less than thirty or sixty days and as much as eight days more than thirty or sixty days and still be considered one or two months for billing purposes.
