

2025 Cost of Service Study – Water and Wastewater Workshop

Board of Directors April 23, 2024

Today's Speakers

Phoebe A. Grow

Principal Management Analyst

Sophia D. Skoda Director of Finance

Agenda

- Cost of Service (COS) Study
 - COS Background
 - COS Process and Considerations
- System Capacity Charge (SCC) Update
- Next Steps

Workshop Objectives

- Review rate setting and COS processes
- Discuss staff recommendations
 - Balance of fixed vs. variable water rates
 - Drought surcharge
 - Tiers for single-family residential
- Discuss wastewater rates considerations
- Discuss SCC changes

COS Board Schedule

- December 2023 Consultant Contract Approval
- April 2024 COS Workshop
- October 2024 Draft Rate Structure Workshop
- January 2025 Biennial Budget/Rates Workshop #1
- March 2025 Biennial Budget/Rates Workshop #2
- April 2025 Proposition 218 Noticing
- June 2025 Rates Hearing

COS Background

2025 COS Scope

- Water System "Proposition 218 Rates"
 - Schedule A Rate Schedule for Water Service
 - Schedule L Drought Surcharge
- Wastewater System "Proposition 218 Rates"
 - Schedule A Rates for Treatment Service
 - Schedule B Wet Weather Facilities Charge

	EBMUD	EFF	ECTIVE 07/01/23	
	SECOND – A WAT readings for all wate	ER FLOW CHARGE FOR W er delivered per unit of water	VATER DELIVERED r (1 unit = 100 cu. ft.) based on one month meter = 748 gallons):

Propositions and Rates and Charges

- 1978 Proposition 13 established property tax rate limitations to 1%
- 1996 **Proposition 218** added procedural and substantive requirements for property-related fees
 - EBMUD conducts COS studies and complies with noticing requirements
- 2010 Proposition 26 reclassified agency fees and charges as taxes
 - District rates and charges conform to listed exemptions

Proposition 218 – Substantive Requirements

- Revenues cannot exceed cost of service
- Revenues can only be used for providing service
- Rates must be proportional to cost of service
- Fees may only be imposed for service that is actually used or immediately available
- Fees may not be imposed for general governmental services
- The burden is on the agency to demonstrate compliance

EBMUD Existing Water System Rates

* For average Single-Family Residential customer, 3/4" meter, 492 gallons/day consumption, FY 2024 rates.

Customer Assistance Program (CAP)

- CAP funded through non-rate revenue (not subsidized by Proposition 218 rates)
- Provides eligible low-income residential customers and homeless shelters a reduction on water and wastewater bill
 - 50% off water service and flow charges
 (Up to max of 1,050 gallons/month per person)
 - 35% off wastewater service and flow charges
 - Additional 35% off for cities' sewer collection charges (Oakland, Emeryville, and Berkeley)

Water System COS Process

The Rate Study Process

How Much?

Revenue Requirements

- Identify costs to be covered by rates
- Inputs include capital costs, operating costs, and financial policies (reserves, debt, etc.)

From Whom?

Cost Allocation by Customer Class

- Develop customer classes based on usage patterns
- Apportion costs to each class

How to Collect?

Rate Design

- Generate rate design that meets agency objectives
- Supported by technical analysis

Key COS Concepts – Water System

- COS Study supports the allocation of the total revenue requirement across or within customer classes
- Peak and maximum potential demands increase system costs
- Ratepayers within a customer class have similar consumption patterns
- Tiered rate structures can be used to account for increased costs of peak and maximum potential demands

COS Study supports the allocation of the total revenue requirement across or within customer classes

Peak and maximum potential demands increase system costs

Ratepayers within a customer class have similar consumption patterns

Fiscal Year 2023 Consumption – Multi-Family and Single-Family Customer Classes

SFR* tiers can recover peak and maximum demand costs

Number of Tiers	Agency
1	 Fresno Dublin San Ramon Services District Alameda County Water District Contra Costa Water District
2	San FranciscoPalo Alto
3	 San Jose East Bay Municipal Utility District Livermore Los Angeles Department of Water and Power Hayward North Marin Los Altos
4	Marin Municipal Water DistrictPleasanton

*SFR – Single Family Residential

SFR tiered rate structures can be used to account for increased costs of peak and maximum potential demands

Current EBMUD SFR Tiered Rate Structure

- Tier 1: first 172 gallons per day Represents average District-wide indoor water consumption based on winter use
- Tier 2: 172 393 gallons per day

Represents average District-wide outdoor water consumption based on summer use

• Tier 3: >393 gallons per day

Represents greater than average outdoor water consumption

Water System Rates Considerations

COS Rate Considerations

- Revenue stability
- Rate stability
- Affordability
- Customer understanding
- Administrative ease
- Conservation
- Drought management

Subject to Proposition 218

Water System Rate Considerations

- Balance of fixed vs. variable rates
- Tiers for single-family residential
- Drought surcharges

Balance of Fixed vs. Variable Rates

- 90+% of water system costs do not decrease if water sales decline
- ~30% of water system rate revenues from the Water Service Charge
- Higher fixed fees enhance revenue stability and moderate impacts of drought
- Lower fixed fees encourage conservation and require increased reserves

Recommendation: Consider changing proportion from fixed fee, subject to COS Study

Three Tier Structure for Single-Family Residential Customer Class

Objectives	Current 3 Tier Structure	•	
Affordability for Essential Use		۵.	
Customer Understanding		Rate	
Conservation			
			Usage

Recommendation: Retain three tier structure, subject to COS Study

Drought Surcharges

- Drought surcharge applies to the flow charge only
- Drought surcharge revenues can cover supplemental supplies, revenue loss, and other drought costs
- In 2021, District spent \$10 million on supplemental supplies during Stage 1

Recommendation: Add Stage 1 Drought Surcharge, subject to COS Study

Current Drought Surcharges

Drought Stage	Maximum Drought Surcharge
1	0%
2	8%
3	20%
4	25%

EBMUD Existing Wastewater System Rates

Service Charge

\$16M

Wastewater System Schedule A

Accounts for ~75% of wastewater rates revenue

Calendar Year 2023 Schedule A Wastewater Revenues

			2170
Portion of Bill	\$/month*	Notes	Flow and
Service Charge	\$8.56	Fixed portion of billSame for all accounts	Strength Charges \$60M 79%
Flow Charge	\$9.30	 Variable portion of bill Capped at 220 gallons/day per (1 – 4 units) 	residential unit
Strength Charge	\$8.92	 Composed of costs for Total Susand Chemical Oxygen Demand Strength based on Business Classing Classing	spended Solids assification Code
Total	\$26.98		

* For average Single-Family Residential customer, 148 gallons/day consumption, FY 2024 rates. Total includes Pollution Prevention Fee (\$0.20/month).

Wastewater System Schedule B – Wet Weather Facilities Charge

- Accounts for ~25% of wastewater rates revenue (FY 2025: \$36 million)
- Established 1987
- Assessed on per parcel basis
- Collected on county
 property tax bill

	SCHEDULE B – WASTEWATER DEPARTMENT WET WEATHER FACILITIES CHARGE EFFECTIVE 07/01/23		
	Annual Charge Collect	ed on Property Tax Bill¹	
	ТҮРЕ	RATE	
Small Lot (0	- 5,000 sq. ft.)	\$135.82	
Medium Lot	(5,001 – 10,000 sq. ft.)	\$212.12	
Large Lot (>	10,000 sq. ft.)	\$484.78	

Wastewater System COS Process

COS Study supports the Allocation of the Total Revenue Requirement among Billing Constituents

Total revenue requirement by function/activity (ex. "secondary treatment" or "digestion") Total revenue requirement by billing constituent

Wastewater System Rates Considerations

Wastewater System Rates Considerations

- Currently Wastewater is billed using 36 different rates based on assigned BCC strength
- Current rate structure has no separate Wet Weather Facilities
 Charge for condominiums

Recommendation: Explore simplifying commercial/ industrial strength billing

Recommendation: Explore feasibility of a separate Wet Weather Facilities Charge for condominiums

Revenue Stability for Wastewater

- Revenues do not vary much year to year including during drought
- Flow charge capped at ~220 gallons per day
 - Limits seasonality of flow charge revenues
 - Cap level corresponds to maximum household wastewater discharge

Nutrients and 2025 COS

- Too early to consider potential future costs associated with nutrients/nitrogen
- No known high nitrogen dischargers in wastewater service area

Next Steps for Cost of Service

- October 2024 Draft Rate Structure Workshop
- January 2025 Budget/Rates Workshop #1
- March 2025 Budget/Rates Workshop #2
- April 2025 Proposition 218 noticing
- June 2025 Rates Hearing

Biennial Budget/
Rates Adoption
Process

Water System Capacity Charge (SCC) Update

Consider Accessory Dwelling Unit (ADU) SCC

- Current practice based in 2021 SCC Study
 - Exempt single-family ADUs are not assessed capacity charges
 - Non-exempt single-family ADUs pay difference between SCC for existing meter and SCC for their new meter
 - Multi-family ADUs are required to pay capacity charges based on square-footage of the ADU
- Minimum criteria for ADU SCC
 - Meets requirements of Government Code Section 66013

FY 2025 Non-Proposition 218 Rates

Rate Adoption Schedule:

- May 9 "GM Rates Report"* mailed to Board
- May 14 Board Meeting Overview of Non-Proposition 218 Rates
- May 28 Strategic Plan & FY 2025 Mid-Cycle Budget Workshop
- June 11 Rates Hearing

*Report and Recommendation of the General Manager Revisions to the Water and Wastewater System Schedule of Rates and Charges, Capacity Charges, and Other Fees Not Subject to Proposition 218, and Regulations for Fiscal Year 2025

Board and Public Comments
