FY 2026 Bond Issue Plans

Planned Financing Activity for FY 2026

- Revenue bond issuance (no change from approved FY 2026/2027 Budget)

	Water	Wastewater
Capital Improvement Program Funding	\$355 million	\$40 million
Build America Bonds De-Risking (if cost neutral)	\$400 million	\$150 million
Board Approval	March 24, 2026	March 24, 2026
Sale Date	April 1, 2026	April 15, 2026
Closing Date	May 6, 2026	May 20, 2026

- Water commercial paper
 - Paydown at least \$10 million in May or June 2026

Build America Bonds (“BABs”) De-Risking

- 2026 issuance will consider refunding EBMUD’s \$550 million in BABs in a de-risking

Capacity Charges Update

About Capacity Charges

- EBMUD has collected Water SCCs since 1983 and Wastewater Capacity Fees (WCFs) since 1984
- Charged to applicants for their proportional share of system capacity to connect to the Water or Wastewater systems or expand use
- Helps to fund the capital improvement programs, including the payment of debt service
- Capacity charges are not:
 - Impact fees (generally charged by cities and counties)
 - Installation charges (which are charged separately)

California law provides basic structure for capacity charges

- Government Code Section 66013 defines capacity charges
 - “ “Capacity charge” means a charge for public facilities in existence at the time a charge is imposed or charges for new public facilities to be acquired or constructed in the future that are of proportional benefit to the person or property being charged”
 - “...those fees or charges **shall not exceed the estimated reasonable** cost of providing the service for which the fee or charge is imposed...”

Review of District's capacity charges

- Staff currently working with independent rate consultant to review District's capacity charges
- Relative to other California water agencies, EBMUD's approach to capacity charges is complex
- A streamlined approach would be easier for applicants for new/expanded service to understand and easier for staff to implement

EBMUD's current SCC schedule is complex

SCC Type	Meter Size	Region	Amount
Single Family Residential	3/4	1	\$ 13,881
	3/4	2	\$ 21,494
	3/4	3	\$ 40,614

Larger Meters (\$/100 gpd)	--	1	\$ 7,305
	--	2	\$ 10,235
	--	3	\$ 8,288

- The District maintains **27 different SCC charges** for meters ≤1½ inch and multi-family residential (MFR)

- For meters >1½” (other than MFR), the SCC is a custom calculation

EBMUD's WCF schedule is also complex

WCF Type	Meter Size	Strength	Amount
Single Family Residential	--	--	\$ 3,125
Multi-Family (> 500 sq ft)	--	--	\$ 2,192
Multi-Family (≤ 500 sq ft)	--	--	\$ 1,712
Non-Residential	5/8	Low	\$ 4,647
	5/8	Medium	\$ 9,404
	5/8	High	\$ 18,413
	3/4 & 1"	Low	\$ 12,215
	3/4 & 1"	Medium	\$ 24,722
	3/4 & 1"	High	\$ 48,405
	1 1/2	Low	\$ 23,796
1 1/2	Medium	\$ 48,161	
1 1/2	High	\$ 94,298	
Larger Meters (\$/unit/year)	--	Low	\$ 35.20
	--	Medium	\$ 71.24
	--	High	\$ 139.49

- The District maintains **12 different WCF charges** for residential applicants and non-residential meters ≤ 1½"
- For non-residential meters > 1½", the WCF is a custom calculation

Water System Capacity Charges

Fundamental concept of capacity charges

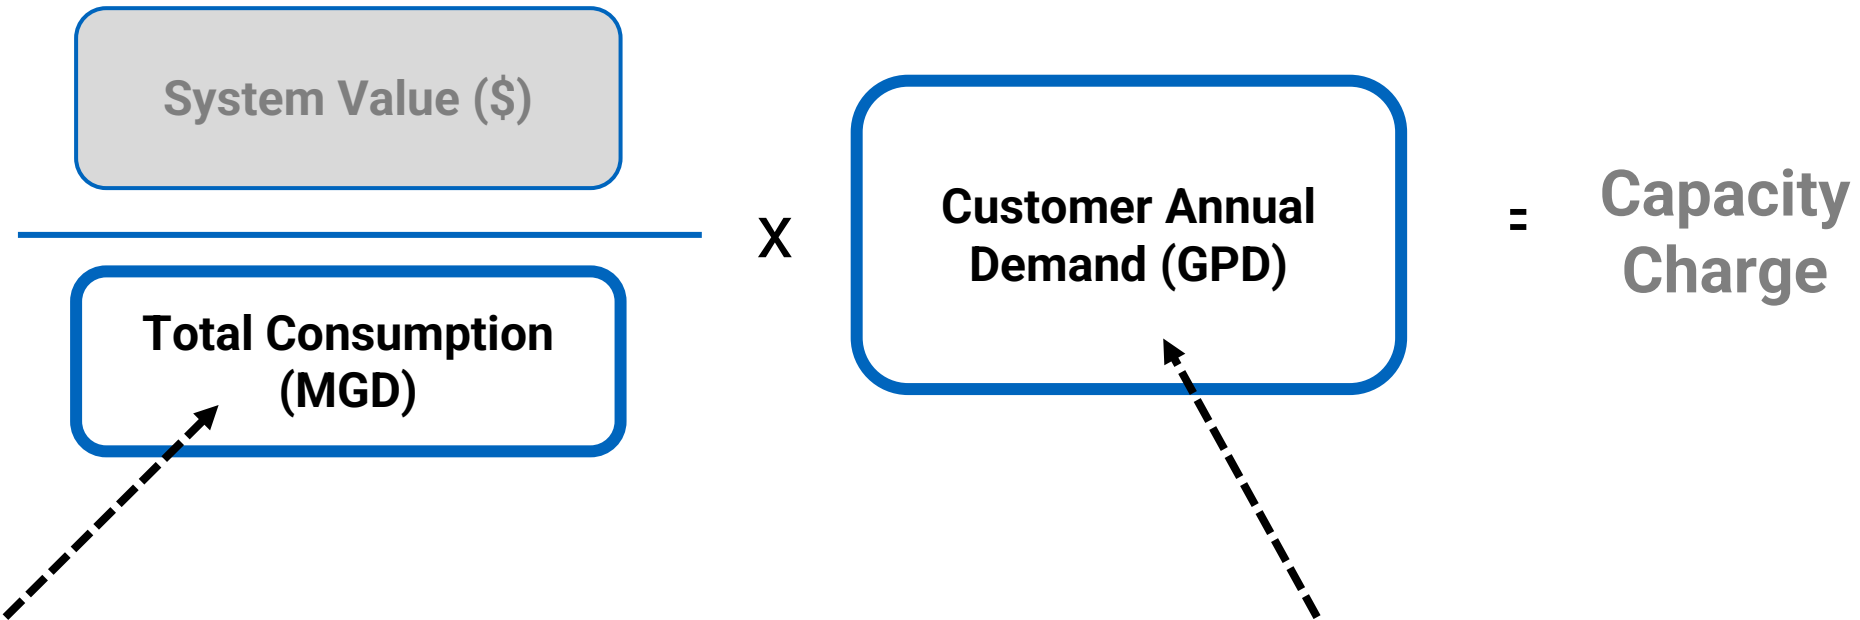

$$\frac{\text{System Value (\$)} \text{ (cost of "pie")}}{\text{System Capacity} \text{ (total "slices")}} \times \text{New Customer Capacity} \text{ ("slices" per account)} = \text{Capacity Charge}$$

System value in capacity charges

- System value represents existing investment in infrastructure
 - Sum of costs of District's capital assets in today's dollars
 - Reduced by depreciation
 - Reduced by debt outstanding

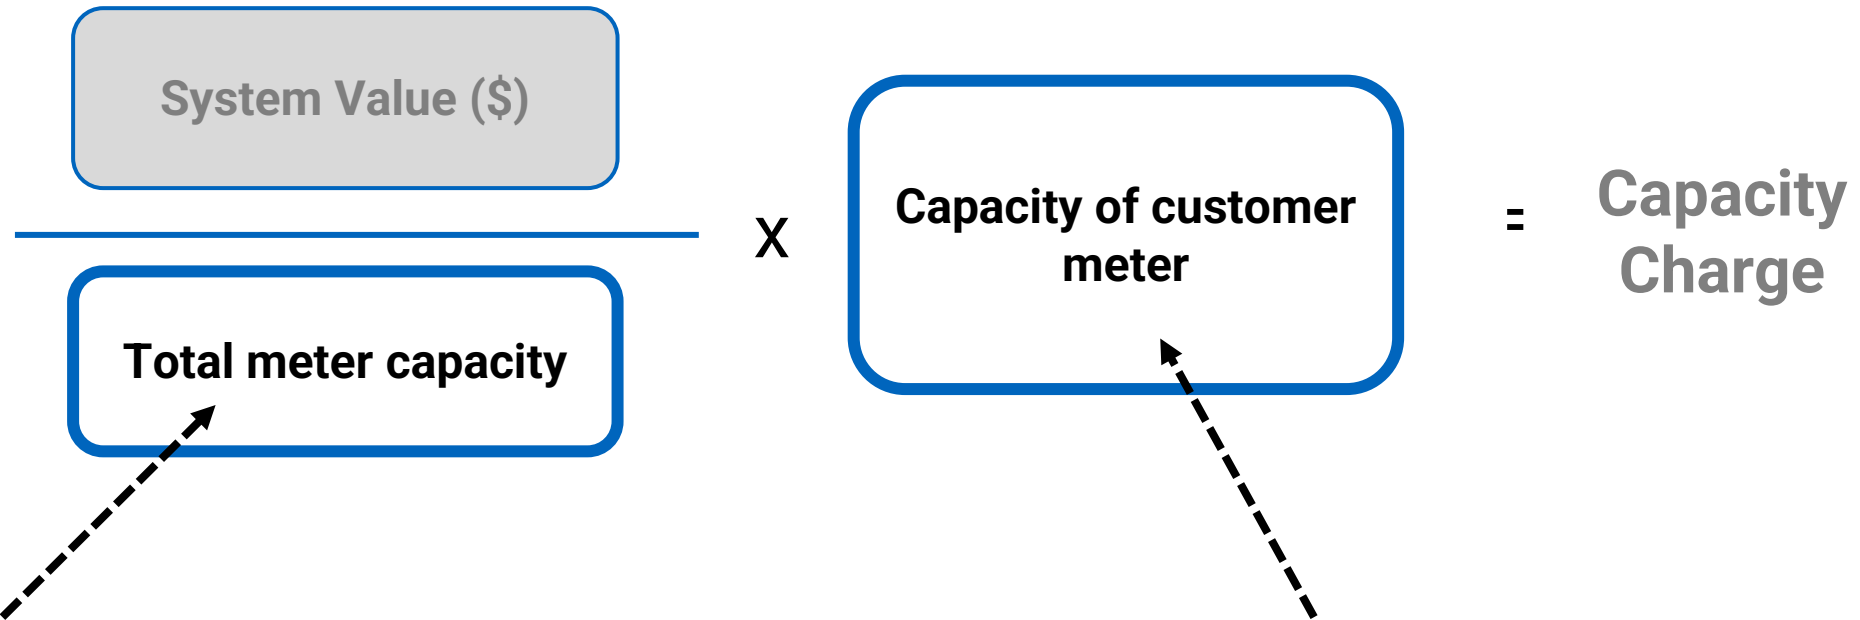

Capacity under current methodology

- System capacity is based on system-wide water use (as projected for 2050)

- New customer capacity based on complex schedule for meters up to 1½”
- Custom calculation conducted for meters >1½”

Approach under consideration

- System capacity is represented as the total projected capacity of all meters (as projected for 2050)

- Meter size represents each customer's capacity

Benefits of using meter capacity to calculate capacity charges

- Straightforward rate schedule, including for Accessory Dwelling Units (ADUs)
 - Easier for applicants to understand; easier for staff to explain
- Largely eliminates need for custom calculations of capacity charges and attention to expanded use
- Well-suited to mature Water and Wastewater systems with gradual growth
