Project Description (classe use a constant page if page 200)

Project Description: (please use a separate page if necessary)

EBMUD's Mokelumne Aqueduct System which includes the Pardee Tunnel, Mokelumne Aqueducts and Lafayette Aqueducts transports untreated water from Pardee Reservoir and the Sacramento River to EBMUD's service area and is the primary supply for 1.4 million people in Alameda and Contra Costa Counties. The Mokelumne Aqueducts consist of three steel pipelines, with the first of the pipelines (Mokelumne Aqueduct No. 1) completed in 1929, and Mokelumne Aqueducts No. 2 and 3 completed in subsequent years. Portions of the Mokelumne Aqueducts within the Sacramento-San Joaquin Delta are at risk of failure due to earthquake and levee failure hazards. Failure of one or more of the Mokelumne Aqueducts would severely reduce the level of water service to EBMUD's customers. To address this potential public health impact, the MARP would replace an approximate 16.5 mile portion of the Mokelumne Aqueducts and bury them in a tunnel between Stockton and Bixler in the existing Aqueduct right-of-way where they cross the Delta. The tunnel would be constructed from four access shafts along the alignment. Two of the existing Aqueducts would be permanently decommissioned and one would be retrofitted and kept for operational flexibility and future outages of the tunnel.

Note: The State Clearinghouse will assign identification numbers for all new projects. If a SCH number already exists for a project (e.g. Notice of Preparation or previous draft document) please fill in.
