Alternative 2 Concept Plan

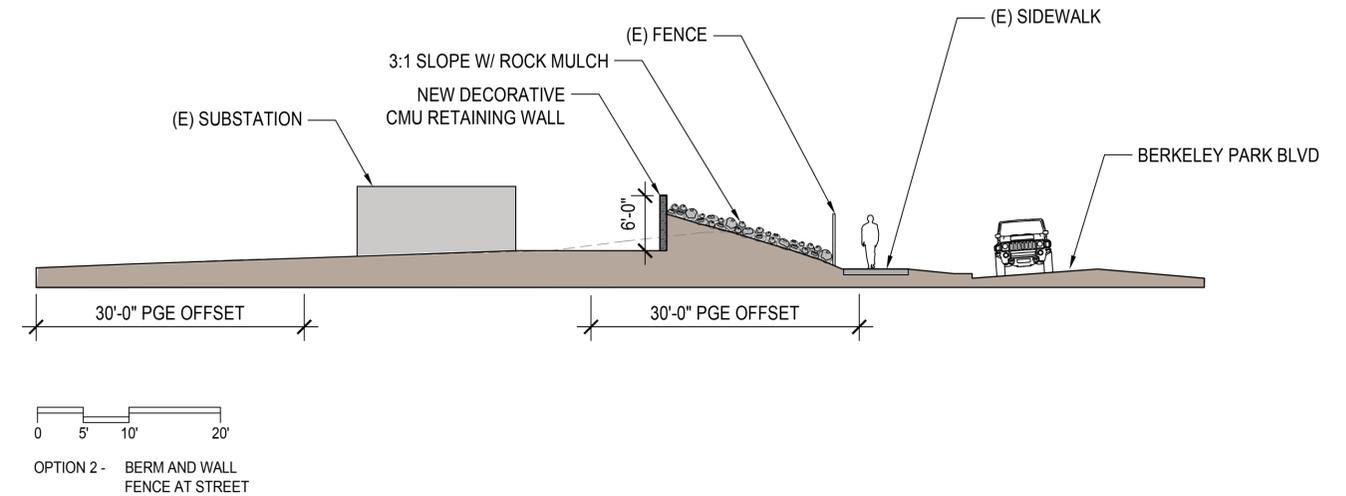

ALTERNATIVE 1

Alternative 1 Concept

Alternative 1 Concept includes construction of a decorative concrete masonry unit (CMU) enclosure around the PG&E substation on the Coventry Road and Berkeley Park Boulevard streets. The site plan and cross sections of Alternative 1 are shown on pages 1 and 3, respectively. Examples of potential CMU enclosures are shown on page 4 and include different finishes and a stucco finish that can be painted similar to the pumping plant building to the north or a color that blends in with the background (i.e., earth tone or green).

ALTERNATIVE 2

Alternative 2 Concept

Alternative 2 Concept includes construction of a decorative concrete masonry unit (CMU) retaining wall/enclosure with a berm (building up earth around the retaining wall) around the PG&E substation on the Coventry Road and Berkeley Park Boulevard streets. The site plan and cross sections of Alternative 2 are shown on pages 2 and 3, respectively. Examples of potential CMU enclosures are shown on page 4 and include different finishes and a stucco finish that can be painted similar to the pumping plant building to the north or a color that blends in with the background (i.e., earth tone or green). The berm would include rock mulch similar to the example shown on page 5.
