2022 Summer Water Transfer from Yuba Water Agency (YWA) to East Bay Municipal Utility District (EBMUD)

Project Description

Due to the Public Health & Safety CVP allocation in 2022 and dry conditions continuing in 2022, EBMUD is pursuing water transfers in 2022. On January 11 2022, a three-way agreement between YWA, Contra Costa Water District (CCWD), and EBMUD (Option Agreement) was approved by the Board and executed, which includes the potential to offer EBMUD and CCWD 15 thousand acre feet (TAF) or more transfer water in the spring (Spring Water) and 10 TAF or more transfer water in the summer (Summer Water). Summer Water would be available to transfer from YWA starting July 1, 2022 through September 30, 2022.

Under the proposed temporary water transfer ("Project"), YWA would release up to 10,000 acre-feet (AF) of Summer Water from New Bullards Bar Reservoir into the Yuba River for transfer to EBMUD from July 1, 2022 through September 30, 2022. The transferred water is made available through YWA's instream flow requirements described in the Yuba Accord Fisheries Agreement and included in YWA's water rights as part of the State Water Resources Control Board (SRWCB)'s implementation of the Yuba Accord. The transfer water would be conveyed through the Feather and Sacramento Rivers to the Sacramento-San Joaquin Delta where it would be diverted by EBMUD at the Freeport Regional Water Authority intake (Freeport Intake) on the Sacramento River. The quantity of diverted would be the released amount from YWA minus any carriage losses. After diversion at the Freeport Intake, the exchanged water would be conveyed through the Freeport Regional Water Authority's joint pipeline, the lower reach of the Folsom South Canal, EBMUD's Folsom South Canal Connection pipeline, and EBMUD's Mokelumne Aqueducts to EBMUD's service area (see Figure 1).

Project Location

The Project Location consists of the transfer pathway of the Yuba Summer transfer. The transfer begins in YWA service area through release at New Bullards Bar Reservoir to the Marysville Gage ("Point of Release"), to the Feather River downstream of Marysville Gage. The water continues to travel in the Sacramento River downstream of the confluence with the Feather River to the Freeport Regional Water Authority (FRWA) intake on the Sacramento River. The transfer water travels through EBMUD/FRWA existing facilities to the Folsom South Canal and EBMUD's Mokelumne Aqueduct system where it is delivered to EBMUD's service area (Alameda, Butte, Contra Costa, Sacramento, San Joaquin, Sutter, and Yuba counties, see Figure 1).

Purpose

On April 27, 2021, EBMUD's Board of Directors declared a continuing water shortage emergency within EBMUD's service area, declared a Stage 1 critical drought, adopted a voluntary District-wide water use reduction goal of 10 percent, and declared the need to use the Freeport Project to deliver supplemental supplies to EBMUD's service area. January and February 2022 were the driest January and February on record in the Mokelumne River watershed. EBMUD continues to experience dry hydrology into 2022, prompting the need to secure supplemental supplies. In January 2022, under Board Motion No. 016-22, the Board approved a one-year water transfer agreement with CCWD and YWA which allows EBMUD to purchase Summer Water from YWA under the Yuba Accord. This Project supports EBMUD's Long-Term Water Supply Strategic Plan goal.

Schedule

The transfer is scheduled to begin in July 2022 and be completed by the end of September 2022.

Approvals

Reclamation approval of a Warren Act contract with EBMUD for storage and conveyance of transfer water through the federally owned Folsom Reservoir and Folsom South Canal.

Public Impacts

No construction activities will be required, and no public impacts are anticipated. Water users within EBMUD's service area will benefit from the increased water supply provided by the Project.

Bases of Exemption

The Project is exempt from the requirements of CEQA on a number of bases:

- 1) Public Resources Code section 21080(b)(4) and CEQA Guidelines Section 15269(c): This project involves specific actions necessary to prevent or mitigate the drought emergency.
- 2) Categorically exempt under Section 15301 for Existing Facilities: Each proposed transfer will not involve any construction or major alteration of facilities. Conveyance of the transferred CVP water would instead occur entirely through existing facilities and would not exceed the normal capacity of those facilities. The exceptions set forth in Section 15300.2 do not apply.
- 3) Categorically exempt under Section 15304 for Minor Alterations: This project involves a minor alteration to the condition of water.
- 4) "Common Sense" exemption under CEQA Guidelines Section 15061(b)(3): There is no possibility of this project having a significant effect on the environment since the water will be conveyed through existing facilities and will not exceed the normal capacity of those facilities.
