## QUESTIONS AND ANSWERS

### TO PROSPECTIVE BIDDERS UNDER RFQ 2408 – LOX SUPPLY AND MAINTENANCE FOR SOBRANTE AND USL WATER TREATMENT PLANTS

Below are questions and answers regarding RFQ No. 2408 – LOX supply and maintenance for Sobrante and USL water treatment plants of the East Bay Municipal Utility District:

1. Please advise if the 360,000 ccf Estimated Annual Quantity referenced on the Bidding Sheet is for **both locations combined** or for **each location**? Also, if the 360,000 ccf is for both locations combined, is the breakout to each location 50/50 or another volume distribution (and what approximately would that share distribution be)?

Answer: The estimated annual quantity is a conservative forecast for both locations combined yet weighing heavily toward the Sobrante plant. The USL plant is seldomly used on a contingency basis and is not expected to use much LOX over the next couple of years as it is currently going through construction. If the USL plant goes into service, we can expect to use 20K-60K ccf while in operation.
